

## **Aero-Formatech® and CellBlock FCS are Leading the Charge for Battery Safety Training**

**MONTREAL, QC AND STANDISH, ME - October 4, 2022**

Montréal based *Aero-Formatech®*, is the leader in Crew Member Training specializing in Emergency Technical skills and well known in the industry for the superior quality of their professional cabin safety curriculum. Since its founding in 1992, *Aero-Formatech®*, has been offering aviation adapted certified training programs around North America, Canada and further abroad. In addressing fire training on-board, they have deliberately presented CellBlock FCS's LIBIK (Lithium-ion Battery Incident Kit) as the best solution to completely extinguish lithium battery thermal runaways inflight. Facilitating purchase of these for their clients closely aligns with their mission to provide a coherent resource for cabin and flight deck safety.

Lisa Sasse, CellBlock's VP of Safety and Security, affirmed, "we realize that no matter how good our product is, proper usage is paramount to its success. *Aero-Formatech®*, is the perfect partner in that they offer a "training first" approach to onboarding the LIBIK as a means of mitigating risk."

CellBlock's LIBIK is a complete lithium-ion battery tool kit that contains fire-suppression pillows, a fire shield blanket, and personal safety equipment including high heat gloves. The CellBlockEX in the pillows can deploy to extinguish fires without the use of water, and is increasingly the preferred method for lithium-ion runaway.

*Aero-Formatech®*, focuses on products that are environmentally friendly. In this too, they have found an excellent partner in CellBlock. Safety is a passion that both companies share, from products to processes. CellBlockEX, the non-toxic foundation of the LIBIK's fire suppressing powers, is produced entirely from post-consumer glass, making it not only the most effective lithium-ion battery fire suppressant, but the most sustainable as well.

*"Everyone benefits from Emergency Training and CellBlock's LIBIK products. It's all about saving lives"*

Daniel Limoges, *Aero-Formatech®*, President

The incidence of lithium-ion fires from personal electronic devices (PEDs) is becoming increasingly frequent, and is a concern for OEM's and airlines. Unparalleled training expertise by *Aero-Formatech®*, supported by an unparalleled product, the Cellblock LIBIK, provides a faster, safer and more effective emergency response.

+++

### **About *Aero-Formatech®***

Our goal is to maintain our status as the leader in Crew member Emergency Training. As a consultant and subject matter expert, we support the aviation industry with adapted emergency training programs and innovative Electrical Cabin Simulators while respecting the environment.

We ensure that each *Aero-Formatech*® instructor bears the responsibility of transmitting their knowledge and thus contributing to saving lives.

#### **About Cellblock FCS**

CellBlock FCS provides modern solutions for a lithium-powered world. Stored energy is increasingly present in our lives. CellBlock's goal is to match the speed of emerging technology with engineered products that address safety concerns at every level — from development to deployment.
